

# UC DAVIS ENVIRONMENTAL HEALTH SCIENCES CENTER 2022 PILOT PROJECTS

## WHO CAN APPLY

- Early stage investigators in Environmental Health Sciences (EHS)
- Established investigators new to EHS
- Established EHS investigators exploring new research directions

## WHAT'S NEEDED

Our pilots support short projects that provide preliminary data for new extramural grant submissions in EHS research. Applications must be relevant to National Institute of Environmental Health Sciences priority areas, include community engagement and have a long-term potential for public health policy initiatives.

## WHEN IT'S DUE

Pilot Project Concept Letters are due **October 28, 2021 at 4 PM.**

## ABOUT US

The UC Davis Environmental Health Sciences Center is funded by the National Institute of Environmental Health Sciences to conduct research about environmental factors that increase risks for diseases and conditions.

We believe in the power of collaboration. Our researchers include epidemiologists, toxicologists, physicians, engineers, chemists, biologists and others working across disciplines to solve society's most vexing environmental health problems. Using a community-engaged research model, we work with NGOs, unions and local agencies to study the physical and emotional impacts of a range of environmental issues affecting human health.

From pesticides and air pollution to climate change and pandemics, our ultimate goal is to translate what we learn into public health policies that improve the lives of people and the planet.
